

5 Must-Know Tips to keep you away from CYBER THREATS

Lock your devices while you are away

When your devices are not in use, make sure they are stored out of sight where possible in a locked drawer or cabinet.

Set up screen saver and password protection

Turn on the screen saver which can auto-lock your devices after 10 minutes of inactivity and set a password to log back in when you return.

Clean out unused applications

If you haven't used an app in the past 6 months, do consider getting rid of it as cybercriminals can exploit vulnerabilities in apps.

Keep your applications updated

The latest application version not only allows you to access the latest features, it also fixes any bugs and security vulnerabilities.

Back-up your files regularly

Data loss can happen in many ways, not just through cyber attacks. Physical failure can also caused data loss. Hence, remember to do your data backup regularly.
